

Luxoft Energy Practice

Today's Energy and Utilities industry is facing the complexities of supply and demand imbalances, mergers, and acquisitions, among many other challenges. Staying ahead of the curve in the competitive and fast-changing environment means efficiently mastering these challenges and effective use of Information Technology is strategically and tactically essential to meeting Utilities goals.

Luxoft is the software development and system engineering solution provider for the Energy and Utilities Industry.

Luxoft Services Map

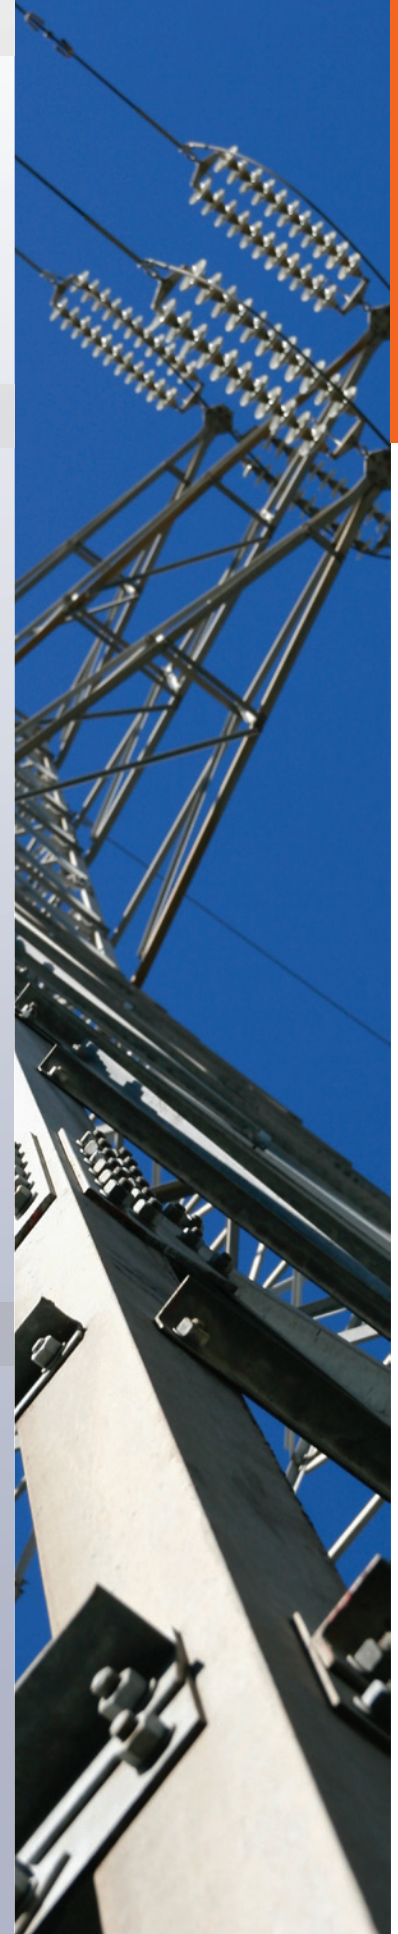

Luxoft Proposal

Luxoft is ideal technology partner for Energy Solutions Vendors

- Extensive experience in developing energy applications
- In-depth technology knowledge and proven track record system engineering projects
- Cutting edge technology adoption
- Strong partnership with key vendors on worldwide and local levels

End-to-end solution delivery

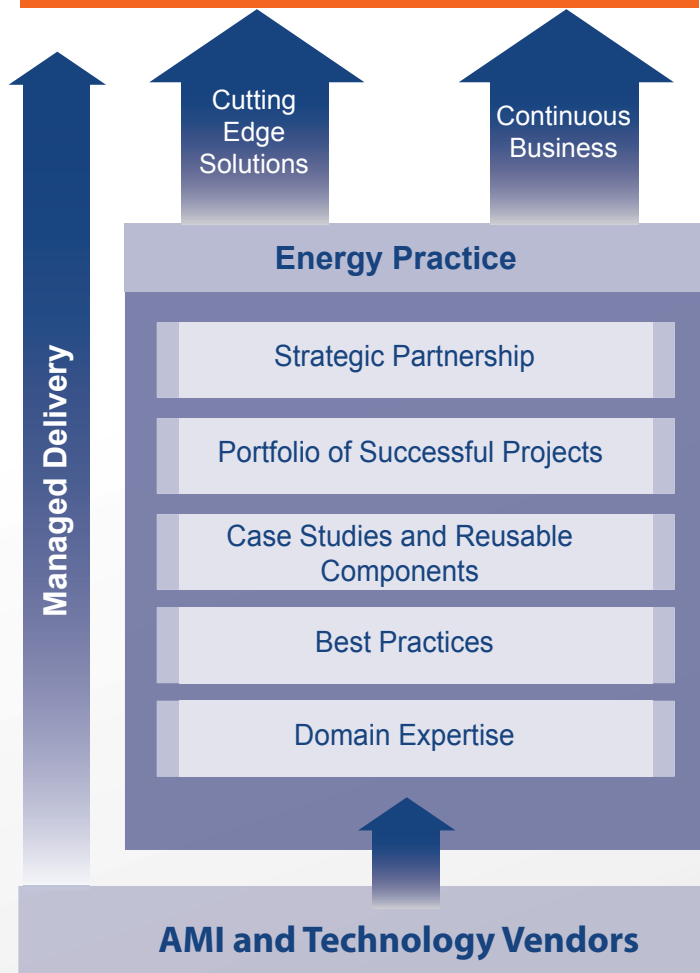

- Architecture design and analysis
- Adaptors and connectors to legacy systems and metering systems development
- Interoperability standards and protocols
- Full-cycle Hardware and Software design, development and maintenance

Luxoft Energy Practice

Application areas

Vendors and Service Providers
faster time-to-market, lower risk,
increased predictability

Luxoft develops the system and components that create the key competitive advantages for the utilities.

Market Management System

Country-level MMS components: day ahead market, capacity auction, market clearance, power transfer across boards and others.

Distribution Management System

Unbalanced distribution power flow, loss and contingency analysis, switch order.

Substation Automation System

Solutions to model, test and manage substation network devices, building fault analysis and diagnostic systems, creating and testing SCADA systems, to integrate industry protocols.

Demand Response Automation

Online meter data analysis, customer portals, intellectual electronic in-home devices, and bi-directional communications.
