LEARN MORE

## Our software product engineering services

Bespoke enterprise products

Attain your business goals with software product engineering solutions perfectly aligned with your strategy. Besides end-to-end enterprise product development, we can also help you meet your product modernization and digital transformation needs.

Bespoke mobile products

Deliver smooth, frictionless mobile experiences to your users with our mobile product engineering services. We'll help you engage users across platforms and devices while driving user satisfaction and conversions.

Cutting-edge tech solutions

Secure a competitive advantage with innovative products. Our software product engineering services can accelerate leveraging emerging technologies like AR/VR, artificial intelligence and machine learning or help you deploy a complex IoT ecosystem.

Our product engineering process

Discovery and planning

Design and prototyping
We follow human-centered design principles to create impactful user flows that drive engagement. Our UI/UX team prepares wireframes and prototypes in iterations to deliver the perfect design for your product.
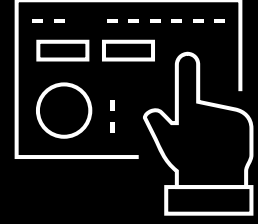

Development and testing

Deployment
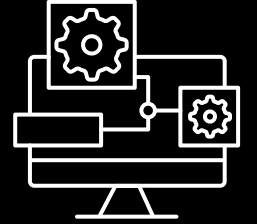

Maintenance and evolution
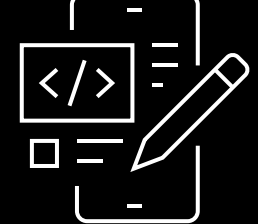

Our technology stack

Front-end development

We ensure your product's UI is responsive and aesthetically pleasing with modern front-end technologies and a tried-and-true, human-centered design methodology.
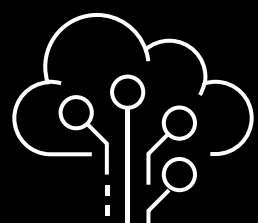

Back-end development

We leverage the best-in-class back-end tech stack to ensure your product shows top performance, remains secure, and can be easily updated and changed as your needs evolve.
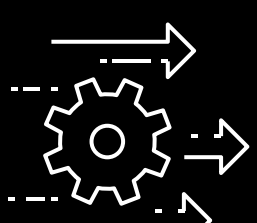

Mobile development

Our product engineering services involve designing and developing native and cross-platform products for various devices and platforms.

Cloud platforms

We'll ensure your product is cloud-ready to help you unlock the full value of the cloud. DXC Luxoft's partner network includes Google Cloud, IBM, Oracle, Microsoft Azure, and AWS.

DevOps tools

Our product engineering services rely on DevOps methodology to streamline integration, deployment and delivery with CI/CD pipelines, automation tools, and bespoke accelerators.
