

Energy and Utilities

Developing and Deploying Next-Generation Solutions in Energy

Integrate systems and introduce secure, reliable, hybrid architectures to relieve pain points from regulations and high-maintenance IT infrastructures. Transform your business with management, maintenance and development systems using the latest in big data, cloud, IoT, mobile and web technologies.

Our Services

Digital Strategy Consulting

Work with our power systems engineering to accelerate and transform your enterprise.

Digital Transformation

Improve user control, ease of access and efficiency by integrating your digital systems and migrating legacy infrastructures into one single place.

- Convert from traditional to platform-agnostic servers
- Decrease costs with the help of cloud services

- Protect sensitive data with hybrid architectures
- Meet strict industry regulations

Process and Project Management Consulting and Coaching

We offer end-to-end consulting services with total dedication to your future success.

- Cost-effective implementation services and support
- Service delivery
- Management options

Energy and Utilities Industry Domains

- Electricity transmission management
- Distribution and outage management
- Distributed energy resources management
- Energy markets management
- Substation automation systems
- Asset management and preventative maintenance
- Renewable generation monitoring and control
- Field mobility integration
- Microgrids

Customer Experience and Design

Connect with your customers and help them consume energy in a more sustainable way via innovative, custom engagement solutions for the energy and utilities industry.

Custom Software Development and Maintenance

Develop and deploy an impressive range of cutting-edge, industry-specific customer service and software solutions.

- Energy management systems
- Distribution and outage management
- Substation automation
- Wide area management
- Renewables monitoring, analytics and forecasting

Product Integration and Deployment

Deploy a range of customized suites and platforms developed for your industry, including monitoring, data visualization, performance analysis and customer engagement.

Systems Connectivity

Unify your software systems into a seamless digital ecosystem. Our agile software engineering, valuable technology partnerships and domain expertise make this possible. Our providers include:

Luxoft is a global consulting partner that offers end-to-end digital solutions to solve clients' complex business challenges. We are a new class of digital service provider that combines consulting, strategy, and engineering at scale. We use this to drive business change by applying engineering excellence, deep domain expertise, and our senior software engineering talent to improve your client's customer experience, boost your operational efficiency, and strengthen your competitive advantage.
